

Edsel D. Nombrado

Mandaue City, Cebu Philippines | edselnombrado@gmail.com | +639-61-430-3723

<https://edsel-personal-portfolio.netlify.app/>

Education

Mindanao State University - Iligan Institute of Technology, BS in Information Technology August 2018 - July 2022

- **Best Thesis Awardee** - ROTC, Simulation Using San-Andreas Multiplayer Platform

Certifications

Spring Boot for Beginners by Amigoscode April 2023

Full-Stack Web Development by KodeGo Oct 2022 - Jan 2023

Internship at Pixel Digital January 2022

Work Experience

Software Engineer, Hipe Japan Inc. March 2023 - Present

- Developed and maintained a production Shopify App Store application with active subscribers, including multilingual solutions and third-party integrations
- Integrated external APIs such as OpenAI and DeepSeek, and worked with Shopify APIs (OAuth, webhooks, billing)
- Built full-stack applications using MERN, Remix, Shopify Polaris, and FastAPI
- Designed and implemented scalable backend systems using FastAPI, Docker, and MySQL
- Developed and maintained RESTful APIs, including email services and SMTP validation
- Optimized backend performance through efficient architecture, multithreading, and resource pooling
- Engineered large-scale web scraping systems with dynamic data extraction, scheduling, and automation
- Implemented robust error handling, retry logic, and logging for reliability and scalability
- Enabled data export (CSV) and automated email delivery workflows
- Developed responsive, component-based front-end interfaces and landing pages
- Created mock service workers (MSW) for API simulation and front-end testing
- Designed and optimized database schemas for user data, assessments, and application content
- Integrated third-party and e-learning tools via APIs
- Collaborated with cross-functional teams to design and deliver user-focused features
- Maintain code quality through debugging, feature enhancements, and technical documentation

Projects

Shopify App Developer (MERN Stack) Dec 2025 - Jan 2026

- Developed, deployed, and maintained a production Shopify App Store translation application with active subscribers
- Built full-store multilingual solutions, including third-party app integrations
- Integrated AI translation APIs (OpenAI, DeepSeek) to enhance application functionality
- Worked with Shopify APIs, including OAuth, webhooks, and billing systems
- Developed full-stack features using MERN stack, Remix, and Shopify Polaris
- Managed and maintained application infrastructure on DigitalOcean

Programming Languages: React, Typescript, Node.js

Server OS • Database: MongoDB, Node.js, REST

License Scraping

July 2025 - Sept 2025

- Extracted dynamic data using JavaScript functions.
- Scheduled scraping for complete data collection.
- Implemented CSV export and automated email delivery.
- Optimized performance with multithreading and ChromeDriver pooling.
- Built backend with FastAPI, Docker, and MySQL.
- Added retry logic and error handling for reliability.

Programming Languages: Python, Programming, Operation Maintenance

Server OS • Database: MySQL, AWS

Ekiten Scraping

July 2024 - Feb 2025

- Collected shop URLs via dynamic pagination scraping.
- Scraped detailed store data (name, address, contact, etc.).
- Enabled CSV export and automated email delivery.
- Optimized scraping with multithreading and ChromeDriver pooling.
- Built backend with FastAPI, Docker, and MySQL.
- Implemented error handling and retry logic.

Programming Languages: Python

Server OS • Database: Docker, MySQL

CMS Sending Email API

Mar 2025

- Developed FastAPI-based Email API.
- Implemented email sending and SMTP check endpoints.
- Dockerized the application.
- Created API documentation.

Programming Languages: Python, AWS

Server OS • Database: Docker, Windows

CMS (Optimization, Maintenance)

Nov 2024 - Apr 2025

- Fixed bugs and resolved errors.
- Implemented new features.
- Optimized backend performance.
- Developed REST APIs.

Programming Languages: PHP

Server OS • Database: jQuery, AWS

CMS Migration

May 2024 - Nov 2024

- Built frontend clone.
- Implemented MSW for API mocking and JSON handling.

Programming Languages: CSS, React, HTML

Server OS • Database: MySQL

SAAS Websites (Spring Campaign & Agricultural)

Jan 2024

- Structured landing page projects.
- Built reusable component-based architecture.
- Implemented responsive design.

Programming Languages: PHP, HTML, Python

Server OS • Database: WordPress, AWS, Docker, Windows

SAS LMS SIS E-Learning Test Result Management

Mar 2023 - Nov 2023

- Developed responsive user interfaces for test creation, administration, and reporting using modern web technologies
- Optimized database schema to efficiently manage test questions, user profiles, and assessment results
- Implemented core features such as question banks, multiple question types, test templates, and customizable configurations
- Integrated e-learning tools and external systems using APIs and standard data exchange protocols
- Collaborated with clients to gather requirements, provide updates, and suggest feature enhancements
- Managed codebase using GitHub, including version control, code reviews, and deployment workflows
- Translated design concepts into full-stack implementations, ensuring functionality, performance, and scalability

Programming Languages: Java, Maven, Spring, Typescript, Tailwind

Server OS • Database: Docker, MySQL

SAS LMS, SIS Application for "Student E-Learning Game Simulation Platform

Aug 2021 - July 2022

- - Document technical specifications, implementation details, and knowledge sharing among team members.
- Write clean, efficient code to implement gameplay systems, including AI behavior.
- Develop algorithms and systems for simulating realistic city dynamics,
- Collaborate with the design team to conceptualize and refine gameplay mechanics, features, and user interactions.
- Contribute creative ideas to enhance the overall player experience.

Programming Languages:C++

Server OS • Database:MySQL

Technologies

Programming Languages: Python, JavaScript (React, TypeScript, Node.js), Java, PHP, HTML, CSS, Tailwind, C++

Server OS • Database / Technologies: MySQL, MongoDB, AWS, Docker, Windows, WordPress, jQuery, Spring, Maven, REST APIs
