

EDSEL NOMBRADO

 Software Engineer

 Cebu

Educational Background

Bachelor of Science in Information Technology

Certifications

springboot (amigoscode - Apr 2022)

full stack web development (codego - Oct 2022)

ojt - web development (pixel digital - Apr 2022)

Professional Experience

software Engineer (3 years Years)

full-stack developer (mernstack) (3months Years)

Projects

SHOPIFY APP DEVELOPER (MERN STACK) Software Engineer							Dec 2025 - Jan 2026
Responsibilities							
- Maintained and enhanced a live Shopify App Store translation app - Built full-store multilingual solutions, including third-party apps - Integrated AI translation APIs (OpenAI, DeepSeek) - Worked with Shopify APIs, OAuth, webhooks, and billing - Developed using MERN stack, Remix, and Shopify Polaris - Managed production app with active subscribers - Deployed and maintained app on DigitalOcean							
Programming Langauges: React, Typescript, Node.js							
Server OS • Database: MongoDB, Node.js, REST							
Frameworks • Middleware • IDE: Node.js, VSCode							
Phases: Requirement Def ✓ Basic Design ✓ Detail Design ✓ Programming ✓ Unit Test ✓ Integration Test							

LICENSE SCRAPPING Software Engineer							Jul 2025 - Sep 2025
Responsibilities							
- creating document - Identified and collected newly added data by execute the jsfunction content dynamically. - Scheduled follow-up scraping to gather full data details (name, address, phone number, etc.) - Integrated Excel (csv) export functionality for scraped data and supported automated email delivery with attachments. - Implemented multithreading and ChromeDriver pooling to improve performance and handle large-scale scraping tasks efficiently. - Designed and managed a backend system using FastAPI with Docker and MySQL for structured data storage. - Applied retry logic, error logging, and exception handling for a resilient and scalable scraping architecture.							
Programming Langauges: Python, Programming, Operation Maintenance							
Server OS • Database: MySQL, AWS							
Frameworks • Middleware • IDE: VSCode							
Phases: Requirement Def ✓ Basic Design ✓ Detail Design ✓ Programming ✓ Unit Test ✓ Integration Test							

EKITEN SCRAPING Software Engineer							Apr 2025 - Jul 2025
Responsibilities							
- creating document - Identified and collected newly listed shop URLs by expanding paginated content dynamically. - Scheduled follow-up scraping to gather full store details (name, address, phone number, genres, access information, etc.) - Integrated Excel (csv) export functionality for scraped data and supported automated email delivery with attachments. - Implemented multithreading and ChromeDriver pooling to improve performance and handle large-scale scraping tasks efficiently. - Designed and managed a backend system using FastAPI with Docker and MySQL for structured data storage. - Applied retry logic, error logging, and exception handling for a resilient and scalable scraping architecture.							
Programming Langauges: Python							
Server OS • Database: Docker, MySQL							
Frameworks • Middleware • IDE: Windows							
Phases: Requirement Def ✓ Basic Design ✓ Detail Design ✓ Programming ✓ Unit Test ✓ Integration Test							

CMS SENDING EMAIL API Software Engineer							Mar 2025 - Mar 2025
Responsibilities							
- Created a email sending API documentation - Setup a python fastapi for Email API - Dockerized the project - Create a api to send an email - Create a api to checkSmtpt							
Programming Langauges: Python, AWS							
Server OS • Database: Docker, Windows							
Frameworks • Middleware • IDE: VSCode							
Phases: Requirement Def ✓ Basic Design ✓ Detail Design ✓ Programming ✓ Unit Test ✓ Integration Test							

CMS (OPTIMIZATION, MAINTENANCE) Software Engineer							Nov 2024 - Apr 2025
Responsibilities							
- fixing bugs and error - implement adding feature - optimize the back end side - creating rest api							
Programming Langauges: PHP							
Server OS • Database: jQuery, AWS							
Frameworks • Middleware • IDE: Proposal of System Solution, Windows, UML, CakePHP, VSCode							
Phases: Requirement Def ✓ Basic Design ✓ Detail Design ✓ Programming ✓ Unit Test ✓ Integration Test							

CMS MIGRATION Software Engineer							May 2024 - Nov 2025
Responsibilities							
- create front end cloning. - creating the mock service worker (msw) for the api json manipulation.							
Programming Langauges: CSS, React, HTML							
Server OS • Database: MySQL							
Frameworks • Middleware • IDE: Sass, Typescript, VSCode							
Phases: Requirement Def ✓ Basic Design ✓ Detail Design ✓ Programming ✓ Unit Test ✓ Integration Test							

SAAS (WEBSITE) SPRING COMPAIGN Software Engineer							Jan 2024 - Jan 2024
Responsibilities							
- Develop landing page project structure - leverage their component-based architecture for modularity and code reusability component. -mplement responsive design principles to ensure that the website layout adjusts dynamically based on the device and viewport size.							
Programming Langauges: PHP, HTML							
Server OS • Database: WordPress							
Frameworks • Middleware • IDE: Sass							
Phases: Requirement Def ✓ Basic Design ✓ Detail Design ✓ Programming ✓ Unit Test ✓ Integration Test							

SAAS AGRICULTURAL (WEBSITE) Software Engineer							Jan 2024 - Jan 2024
Responsibilities							
- Develop landing page project structure - leverage their component-based architecture for modularity and code reusability component. -mplement responsive design principles to ensure that the website layout adjusts dynamically based on the device and viewport size.							
Programming Langauges: PHP, HTML							
Server OS • Database: WordPress							
Frameworks • Middleware • IDE: Sass							
Phases: Requirement Def ✓ Basic Design ✓ Detail Design ✓ Programming ✓ Unit Test ✓ Integration Test							

SAAS LMS SIS E-LEARNING TEST RESULT MANAGEMENT Software Engineer							Mar 2023 - Nov 2023
Responsibilities							
- Developed responsive user interfaces for test creation, administration, and reporting using modern web technologies - Optimized database schems to efficiently manage test questions, user profiles, and assessment results - Implemented core features such as question banks, multiple question types, test templates, and customizable configurations - Integrated e-learning tools and external systems using APIs and standard data exchange protocols - Collaborated with clients to gather requirements, provide updates, and suggest feature enhancements - Managed codebase using GitHub, including version control, code reviews, and deployment workflows - Translated design concepts into full-stack implementations, ensuring functionality, performance, and scalability							
Programming Langauges: Java, Maven, Spring							
Server OS • Database: Docker, MySQL							
Frameworks • Middleware • IDE: Typescript, Tailwind							
Phases: Requirement Def ✓ Basic Design ✓ Detail Design ✓ Programming ✓ Unit Test ✓ Integration Test							

SAAS LMS, SIS APPLICATION FOR "STUDENT E-LEARNING GAME SIMULATION PLATFORM" Software Engineer							Aug 2021 - Jul 2022
Responsibilities							
- Document technical specifications, implementation details, and knowledge sharing among team members. - Write clean, efficient code to implement gameplay systems, including AI behavior. - Develop algorithms and systems for simulating realistic city dynamics. - Collaborate with the design team to conceptualize and refine gameplay mechanics, features, and user interactions. - Contribute creative ideas to enhance the overall player experience.							
Programming Langauges: C++							
Server OS • Database: MySQL							
Frameworks • Middleware • IDE: None							
Phases: Requirement Def ✓ Basic Design ✓ Detail Design ✓ Programming ✓ Unit Test ✓ Integration Test
